Education

Purdue University, Polytechnic Institute, College of Science **West Lafayette, IN**

B.S. Computer Science (Graphics & Visualization) & B.S. Game Development and Design *May 2028*

Experience

Treasurer, Software Engineer **West Lafayette, IN**

Hack The Future *October 2025 – Present*

- Develop a full-stack web app for Sheltering Wings, a local nonprofit partner with 30-50 employees, with separate manager and user dashboards for scheduling, task tracking, and check-in/check-out functionality.
- Implement 4 primary user workflows – chores, calendar, login, and user management – through an accessible web interface using React and MongoDB.
- Collaborate in cross-functional teams of 10+ (developers, designers, team leads) using agile workflow to deliver production-ready solutions.

XR Undergraduate Researcher **Remote**

Purdue University, Dr. Voicu S. Popescu, Associate Professor *May 2026 – September 2026*

- Architected a fully local Unity VR pipeline (Whisper speech-to-text + 3B-parameter Qwen2.5-Coder LLM) that compiles natural language voice commands into live, executable Lua object behavior across 6 composable channels, achieving 96.7% pipeline success over 30 benchmark tests.
- Built a sandboxed Lua execution pipeline (MoonSharp) with API allowlisting and semantic validation, blocking 151 unsafe generations across 10 logged sessions while keeping combined validation and injection latency under 11ms.
- Designed a JSON-schema-constrained decision format enabling composable multi effect commands and instant rollback; integrated XR controller input, tracking, and velocity data for context aware behaviors.

AI Agent Development Intern **Remote**

Euterpe *May 2026 – August 2026*

- Support development of an AI agent that connects to DAWs (Ableton, FL Studio) via MIDI and APIs, reading project context and proposing arrangement, sound design, and mix-check actions.
- Build and test components of a project-aware RAG pipeline for retrieval and tool selection, contributing to the backend worker that processes user interaction data.
- Collaborate with the engineering team on a native TypeScript/React and Rust-based agent app, supporting model integration and agentic tool execution across the stack.

Frontend Development Intern **Remote**

King of the Curve *September 2025 – March 2026*

- Built responsive mobile and web UI components using Flutter and Dart, delivering features aligned with product and design requirements, including "gamified" study tools for medical students.
- Converted Figma prototypes into accessible, reusable UI components that maintain visual and interaction consistency across the platform.
- Improved usability and user workflows for a platform with 400,000+ total users and 16,000+ monthly active users, helping strengthen engagement and retention.

Projects

Kiln Game Jam | *Godot, GDScript, Photoshop*

- Won 1st place in a 48 hour game jam; built gameplay systems with procedural modifiers and dynamic dialogue.
- Designed art assets and implemented randomized challenges to improve replayability.

Spotlight Kanban Board | *React.js, Supabase, CSS*

- Built a custom Kanban-style web app in React with drag-and-drop workflow management.
- Implemented a distinctive interactive UI with a unique spotlight effect, animated visual layers, responsive layouts, and Supabase-backed task, team, label, comment, and activity data management across 4 main event categories.

Extracurricular Activities

Purdue University Dance Marathon **March 2025 – Present**

Color Captain – lead 1 of 6 color teams for the organization's student-run philanthropy

Sigma Pi Fraternity **September 2024 – Present**

Treasurer / Mental Health Chair / Member

Skills

Languages / Frameworks: React.js, Node.js, Java, MongoDB, Python, C++, C, C#, SQL, GDScript, JavaScript, Lua, Dart, HTML/CSS, Flutter, Git, REST API, Spring Boot

Software / Tools: Visual Studio, VS Code, Adobe Photoshop, DaVinci Resolve, Godot, Unity, Unreal Engine, Maya, Docker, AWS, Linux, Figma, Supabase, Claude, Codex
